Is it possible to put all of the HWO's in a separate folder? There are so many of these weather updates, other messages get lost in the shuffle.

Hi Tom,
   I've had these yahoogroups.com messages forwarded to a yahoo email address, where I then use yahoo's email filters to put things like HWOs in their own folder. I further filter the HWOs so that things like Skywarn activation requests get sent to my main email in order to get my attention. If you can make it to Saturday's meeting, I can show you how to do so after the meeting.

Subject: [SW_SKYWARN] Reorganize message boards?

Is it possible to put all of the HWO's in a separate folder? There are so many of these weather updates, other messages get lost in the shuffle.

10147. Skywarn Activation Day

From: swcaskywarn

Skywarn Activation Day is from Friday Nov 30, 4PM until Saturday, Dec 1, 4PM. We need radio operators for this event, plus anyone who wants to learn how to log the "QSOs" at the Rancho Bernardo office of the NWS.

We'll have 1-hour timeslots available for those that wish to participate. You can have as many timeslots as you want. 1 or 2 person teams are OK, plus 1 observer if you like. One or more properly licensed hams need to be present during operation of the ham radio equipment.

Please contact Jim at wb6zpb-at-yahoo-dot-com for scheduling your preferred timeslots (no promises) or for any questions related to this event. We need to provide your names to the NWS before you arrive. I may refer you to Laura or Jerry during all this, depending on circumstanses.

Hope to see you there!

I've been in bed since the 16th with complications from a bad flu, so I won't be well enough by the weekend to participate, but I'd like to know more about this. Do you solicit qso's from as many people as possible, and do you send out QSL cards? Let me know the frequencies and I'll tune in from home and listen in.

Hi Tom,
   we'll be all over the HF bands and possibly IRLP node 9250, likely through PAPA's Palomar machine. Call my cell phone Friday evening or early Saturday afternoon and I'll arrange a sked. If you feel better by then, stop by.

I've been in bed since the 16th with complications from a bad flu, so I won't be well enough by the weekend to participate, but I'd like to know more about this. Do you solicit qso's from as many people as possible, and do you send out QSL cards? Let me know the frequencies and I'll tune in from home and listen in.

I wanted to notify everyone that I changed my call sign so that if you hear me, you will know that it is me, Tom, formerly known as "N6TKT."

My new call is AA6TS. I wanted a call with my initials in it. I have been waiting almost a year to get "K6TS," which is a nice short call, but in the final week of the 2-week grace period, the owner of that call renewed it, so I selected the next best call with my initials in it!

Here is a link to a website SDG&E has that shows forecasted wind gusts for locations around the county. Might be interesting for our upcoming wind event, followed by the rain event.

Hi Ed,
thing is, that is website by SDG&E that uses their weather station network. Their service area is pretty much confined to the areas you see on the map. Not sure if other Electric utilities provide a similar service.

Another windmap link that may be interesting is:

http://hint.fm/wind/

You can zoom into areas that interest you. Seems to be current conditions (or recent anyway) only.

10240. SDG&E discussion of their weather network

The Greater Valley Center Fire Safe Council presents a free talk on Weather and Electrical Safety.

An evening with the SDG&E weather and safety staff

Wednesday December 12, 7PM

At the Maxine Theater in Valley Center, CA.

SDG&E meteorologists Steve Vanderburg and Brian D'Agostino will discuss the system of weather stations SDG&E has been building in the County and other steps the company has been taking to make their power distribution system safer in the face of severe weather events.

Since the 2007 fires, SDG&E has built a tremendous number of weather monitoring stations throughout San Diego County, making the weather in our area the most monitored in the country. These stations provide the company with real-time information on winds, temperature and humidity. They use this information to determine whether parts of their system should be temporarily de-energized, where safety upgrades are needed, and where safety patrols should be increased.

Members of the SDG&E weather staff will show the extent of their network, discuss how it affects you, and how the company will react in the event of severe fire weather such as what we had during the Fire Storm of 2007.

A question and answer session will follow the talk.

The Maxine Theater is located at 31322 Cole Grade Road, Valley Center, CA.

Please direct questions to either (both is better)
Jim, wb6zpb@..., or another Jim, kf6rwf@earthlink.net

I'd do it, but I live so far away from the repeater, sometimes I can't get a signal through. There have been times when I could barely hear what is going on. I upped my power to 50 watts and that helped a little, but still unreliable. I hope someone can do the net. As a last resort, I will try listening at 7pm, and if I don't hear a net happening, I'll give it a try. I have a copy of the net script.

Hello,

There is a possibilty that Skywarn may be asked to activate this afternoon. Possible concerns would be thunderstorm(s) along and west of the mountains.

If Skywarn is indeed activated, you will get word in a subsequent notification following this one. Ham radio operators will then monitor the ECRA palomar repeater on 147.030,+,103.5 to participate in the Skywarn net.

All spotters are encouraged to report significant weather at http://www.swskywarn.org/ReportWeather.php at any time, whether or not you're part of Skywarn. Don't sweat it when the website asks for your Spotter ID if you don't know it. Just leave that part blank, and you can enter your location elsewhere.

Hello,

The NWS will *NOT* need a Skywarn activation tonight. There will indeed be showers off and on through the rest of the night, with snow down to 3500 feet or so. Travel on I-8 may be affected.

The NWS does ask if you get snow to please report it via http://www.swskywarn.org/ReportWeather.php . Of course that also goes for any other significant weather!

Thanks for participating! :)

Is the Palomar repeater down this morning (1/15)? I wanted to reach someone from Julian, so I figured he would be on Palomar. I tried from El Cajon, La Mesa, Spring Valley, Lemon Grove, and four areas of San Diego as I drove into work this morning, and was unable to hit the repeater. I know that it has poor coverage, but I expected better than this. I will try to get on the net tonight from home. Wish me luck!

The National Weather Service is looking forward to any reports of hail, snow, or high winds with tonight's storm. As you know, the snow level may briefly reach down to 1500 feet. Should you experience hail of any size, please tell the NWS at http://www.swskywarn.org/ReportWeather.php . Also, if you rarely get snow, but you do get some with this storm, please report that too. Same goes for any wind damage.
Thanks in advance!

I am looking to buy a new weather station. I have had a few and have not had good luck in my selection. My latest is a La Crosse 2813U-IT.
The wind gauge is not working and the rain gauge is way off.
Are there any systems that are good at under $300 or near that?

Ed,

I really like my Davis Vantage Vue.

Check around for price. Check ambientweather.com and full out your email to have them email you their price. I actually got mine there cheaper than Dayton a few years back.

Hi,Ed:

I use a Davis Vantage Vue. The unit is compact and mounts easily. I haven't had any problems with it and I've been using it for about two years now. Shop around online and you can get it for less than $300.

Hope this helps.

Take care,

I am not familiar with the Vantage Vue, but our
family has had a basic Davis Instruments weather
station (wired) in use for over 20 years. The
higher end systems are expensive, but built well.

Congratulations on your new weather station. Maybe someday I will own a Davis, but right now it seems so many other things are after my money! My Ambient Weather station seems to work well in the meantime, and has been giving accurate readings. I had to replace the radio sending unit and the wind speed unit, but it is nice that all of the pieces are available separately. Enjoy your Davis when it arrives!
